

Notes for Grade 11 March 23, 2020

Hope all of you are doing well and staying occupied.

1. Before the break I said that the Very Voracious Vectors assignment was due today. Obviously, that is a bit of a problem. Some of you have already submitted it. The rest of you need to via email or google docs to linda_takken@bgcdsb.org, hopefully by the end of the week. If you don't have a copy there is one on the website under the assignment column. If you have questions take a photo of your solution so far and email it to me with your query and I will try to help you this way.
2. In addition if you missed the note from the Friday before March Break copy it down or print it out. It is on the website under the notes column called [u2_l8_newton's_third_law.pdf](#)
3. Tomorrow I will post a small note and more instructions on the website. It will be about forces and include some practice problems to try. If you don't have your textbook email me and I will try to help with this situation.
4. Sometime this week send me an email at linda_takken@bgcdsb.org to check in so that I can see who might not be getting the notes. Sort of a way of doing attendance. Check in with your friends that missed on Friday before March Break to tell them to check the website.
5. Today's Trivia Question (first person to send me the answer via email gets a bonus mark). You can count this as your attendance email as well.

"Which bone are human babies born without?"

That's all for today. Keep safe and check back tomorrow.
